

Driver Coaching Report

Mode: single_session

Session Context:

- Circuit: miami gp
- Session Type: Test
- Date/Time: 11/04/2026 17:22:14
- Sample Rate: 360, Hz
- Session Duration: 1258.48, s
- Coached Driver: Unai Orbe Deusto
- Coached Car: superformulalights324
- Laps Used: 10 valid / 12 total
- Coached Best Lap: 111.547 s
- Coached Theoretical Optimal Lap: 109.710 s
- Coached Potential Gain (Best - Optimal): 1.837 s
- Corner Model: detected 19 corners

Main Entry Issue: Entry phase is costing time versus reference.

Main Mid-Corner Issue: No dominant mid-corner issue in current priority set.

Main Exit Issue: Exit phase is costing time onto the following straight.

Track Usage Assessment: Track-position proxy active (apex delta vs reference).

Graph Guide:

- Orange background = braking phase.
- Purple background = rotation / mid-corner phase.
- Green background = traction / exit phase.
- Vertical dotted line = apex point.
- Driver median = median trace across valid laps.
- Driver IQR = interquartile range (25th to 75th percentile) across valid laps.
- Coached best-corner lap (red dash-dot) = fastest corner segment achieved by the coached driver.
- Reference = green dashed in vs-reference mode, red dashed in single-session mode.
- Brake panel auto-focuses to the active braking zone when long zero-brake sections dominate the window.
- Throttle, steering, yaw-rate, and lateral-accel panels may auto-focus to active signal regions (speed keeps broader context).
- X axis uses lap distance in meters when LapDist is available.

Top 3 Priorities:

1. T16 [exit]

Key Issue: Exit phase is costing time onto the following straight.

Priority Action: Commit throttle as steering opens, then build to full throttle with one smooth ramp.

Practice Focus: 3 laps: repeat the full-throttle point within +/-5 m with no second steering correction.

Confidence: medium

2. T17 [exit]

Key Issue: Exit phase is costing time onto the following straight.

Priority Action: Commit throttle as steering opens, then build to full throttle with one smooth ramp.

Practice Focus: 3 laps: repeat the full-throttle point within +/-5 m with no second steering correction.

Confidence: medium

3. T1 [entry]

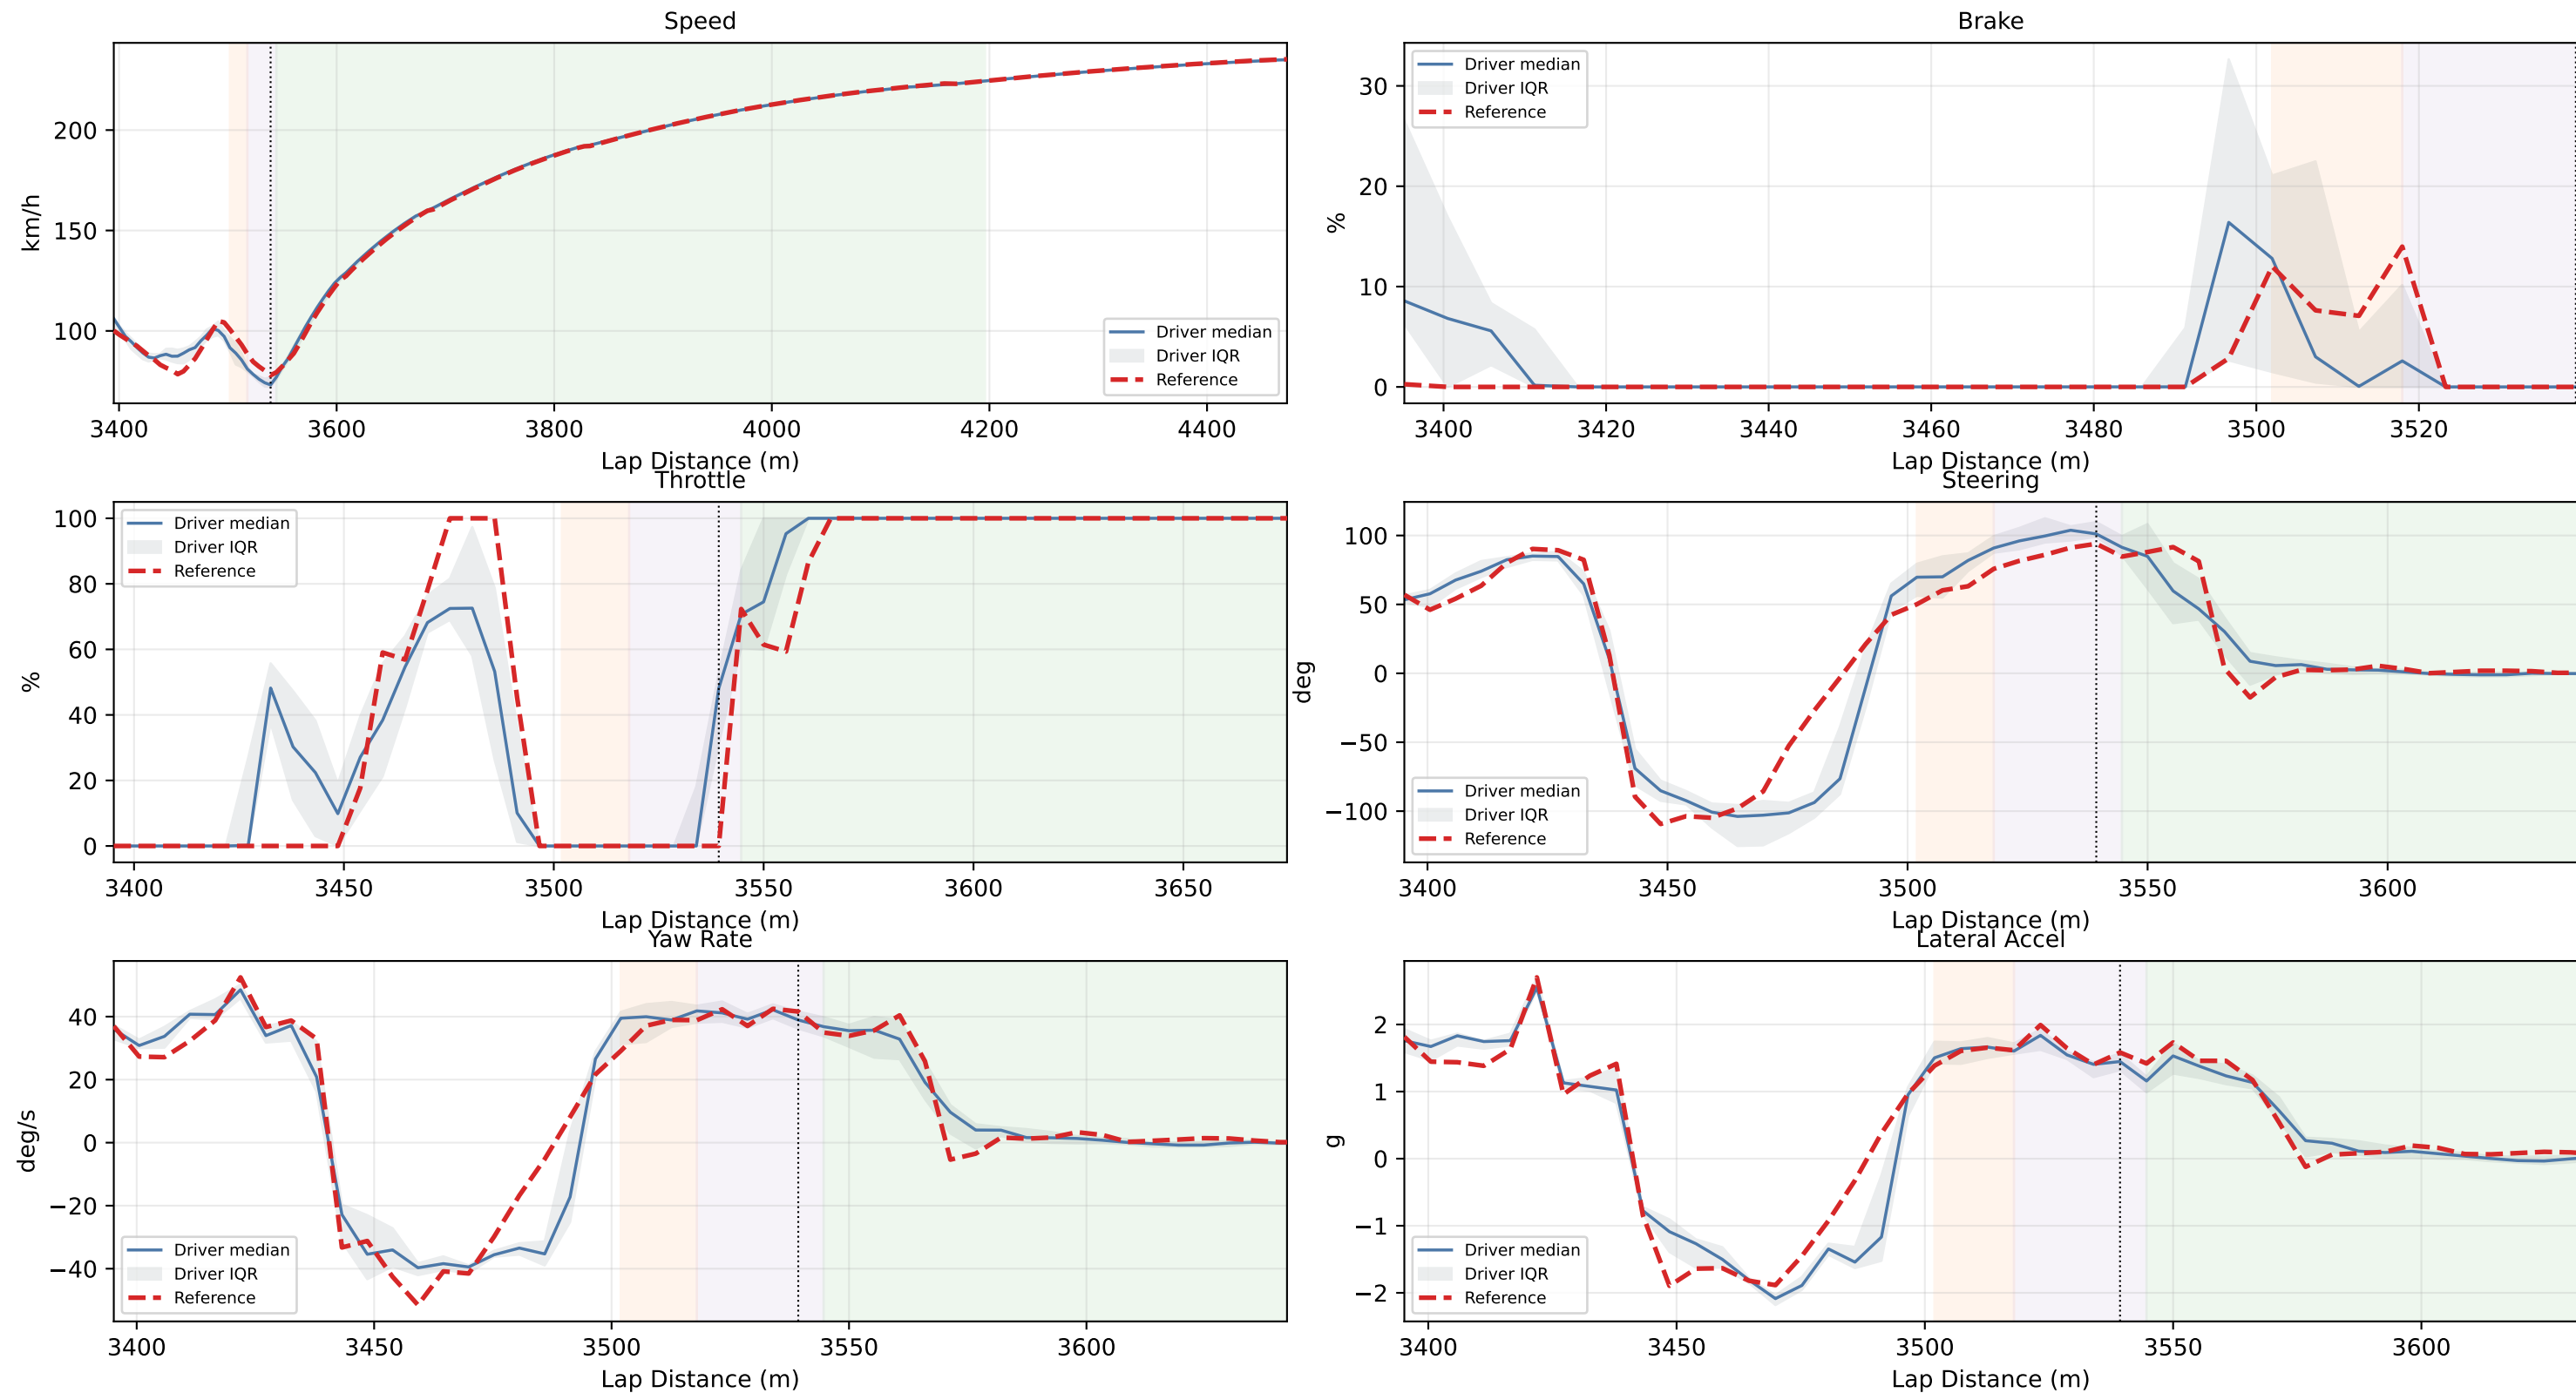

Key Issue: Entry phase is costing time versus reference.

Priority Action: Focus on cleaner brake-release timing to carry minimum speed without destabilizing the car.

Practice Focus: Compare two consecutive laps and target identical release timing each lap.

Confidence: high

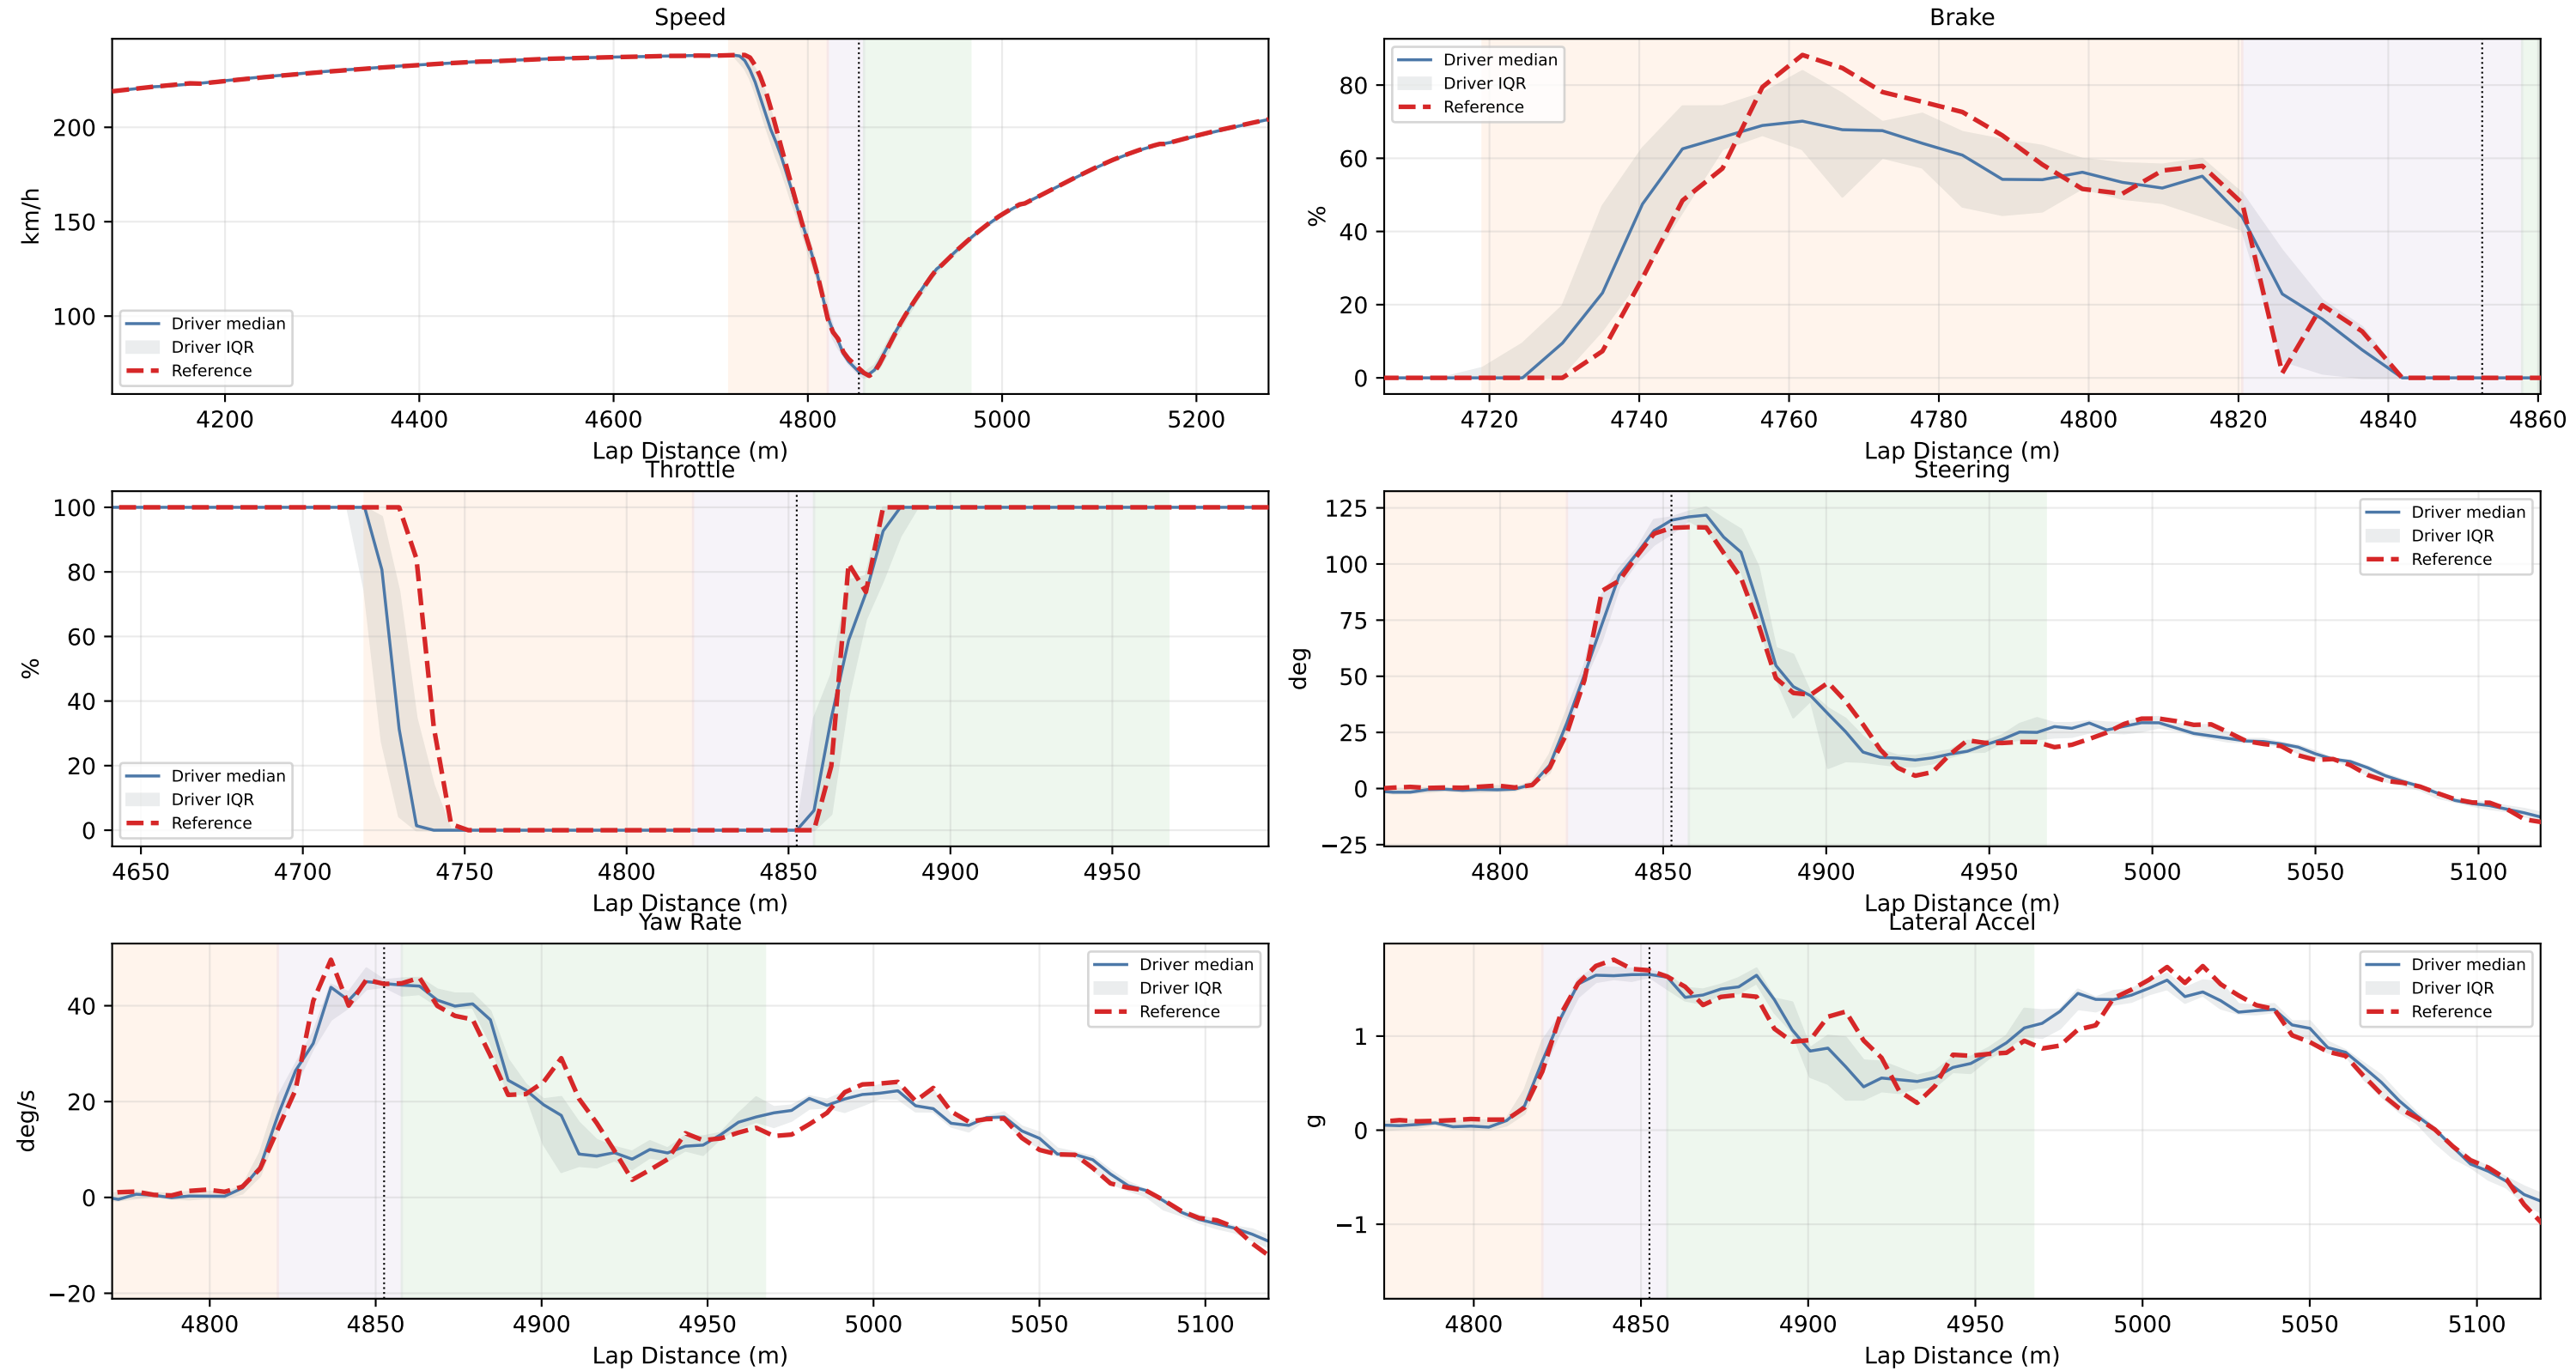

T16 Coaching (Priority 1)

Reference Segment Used: Self best-per-corner lap 10

Coaching Summary: T16 | Exit priority. Symptom: Exit phase is costing time onto the following straight. Likely cause: Throttle commitment and steering unwind are not translating into early acceleration. Evidence: time loss +5.093 s; variability +6.933 s; apex speed delta +3.83 km/h; traction time delta +3.776 s; throttle reapply delay +0.000 % lap; exit long accel delta +0.001 g; apex position offset +0.56 m. Recommended action: Commit throttle as steering opens, then build to full throttle with one smooth ramp. Practice focus: 3 laps: repeat the full-throttle point within +/-5 m with no second steering correction. Confidence: medium (0.71).

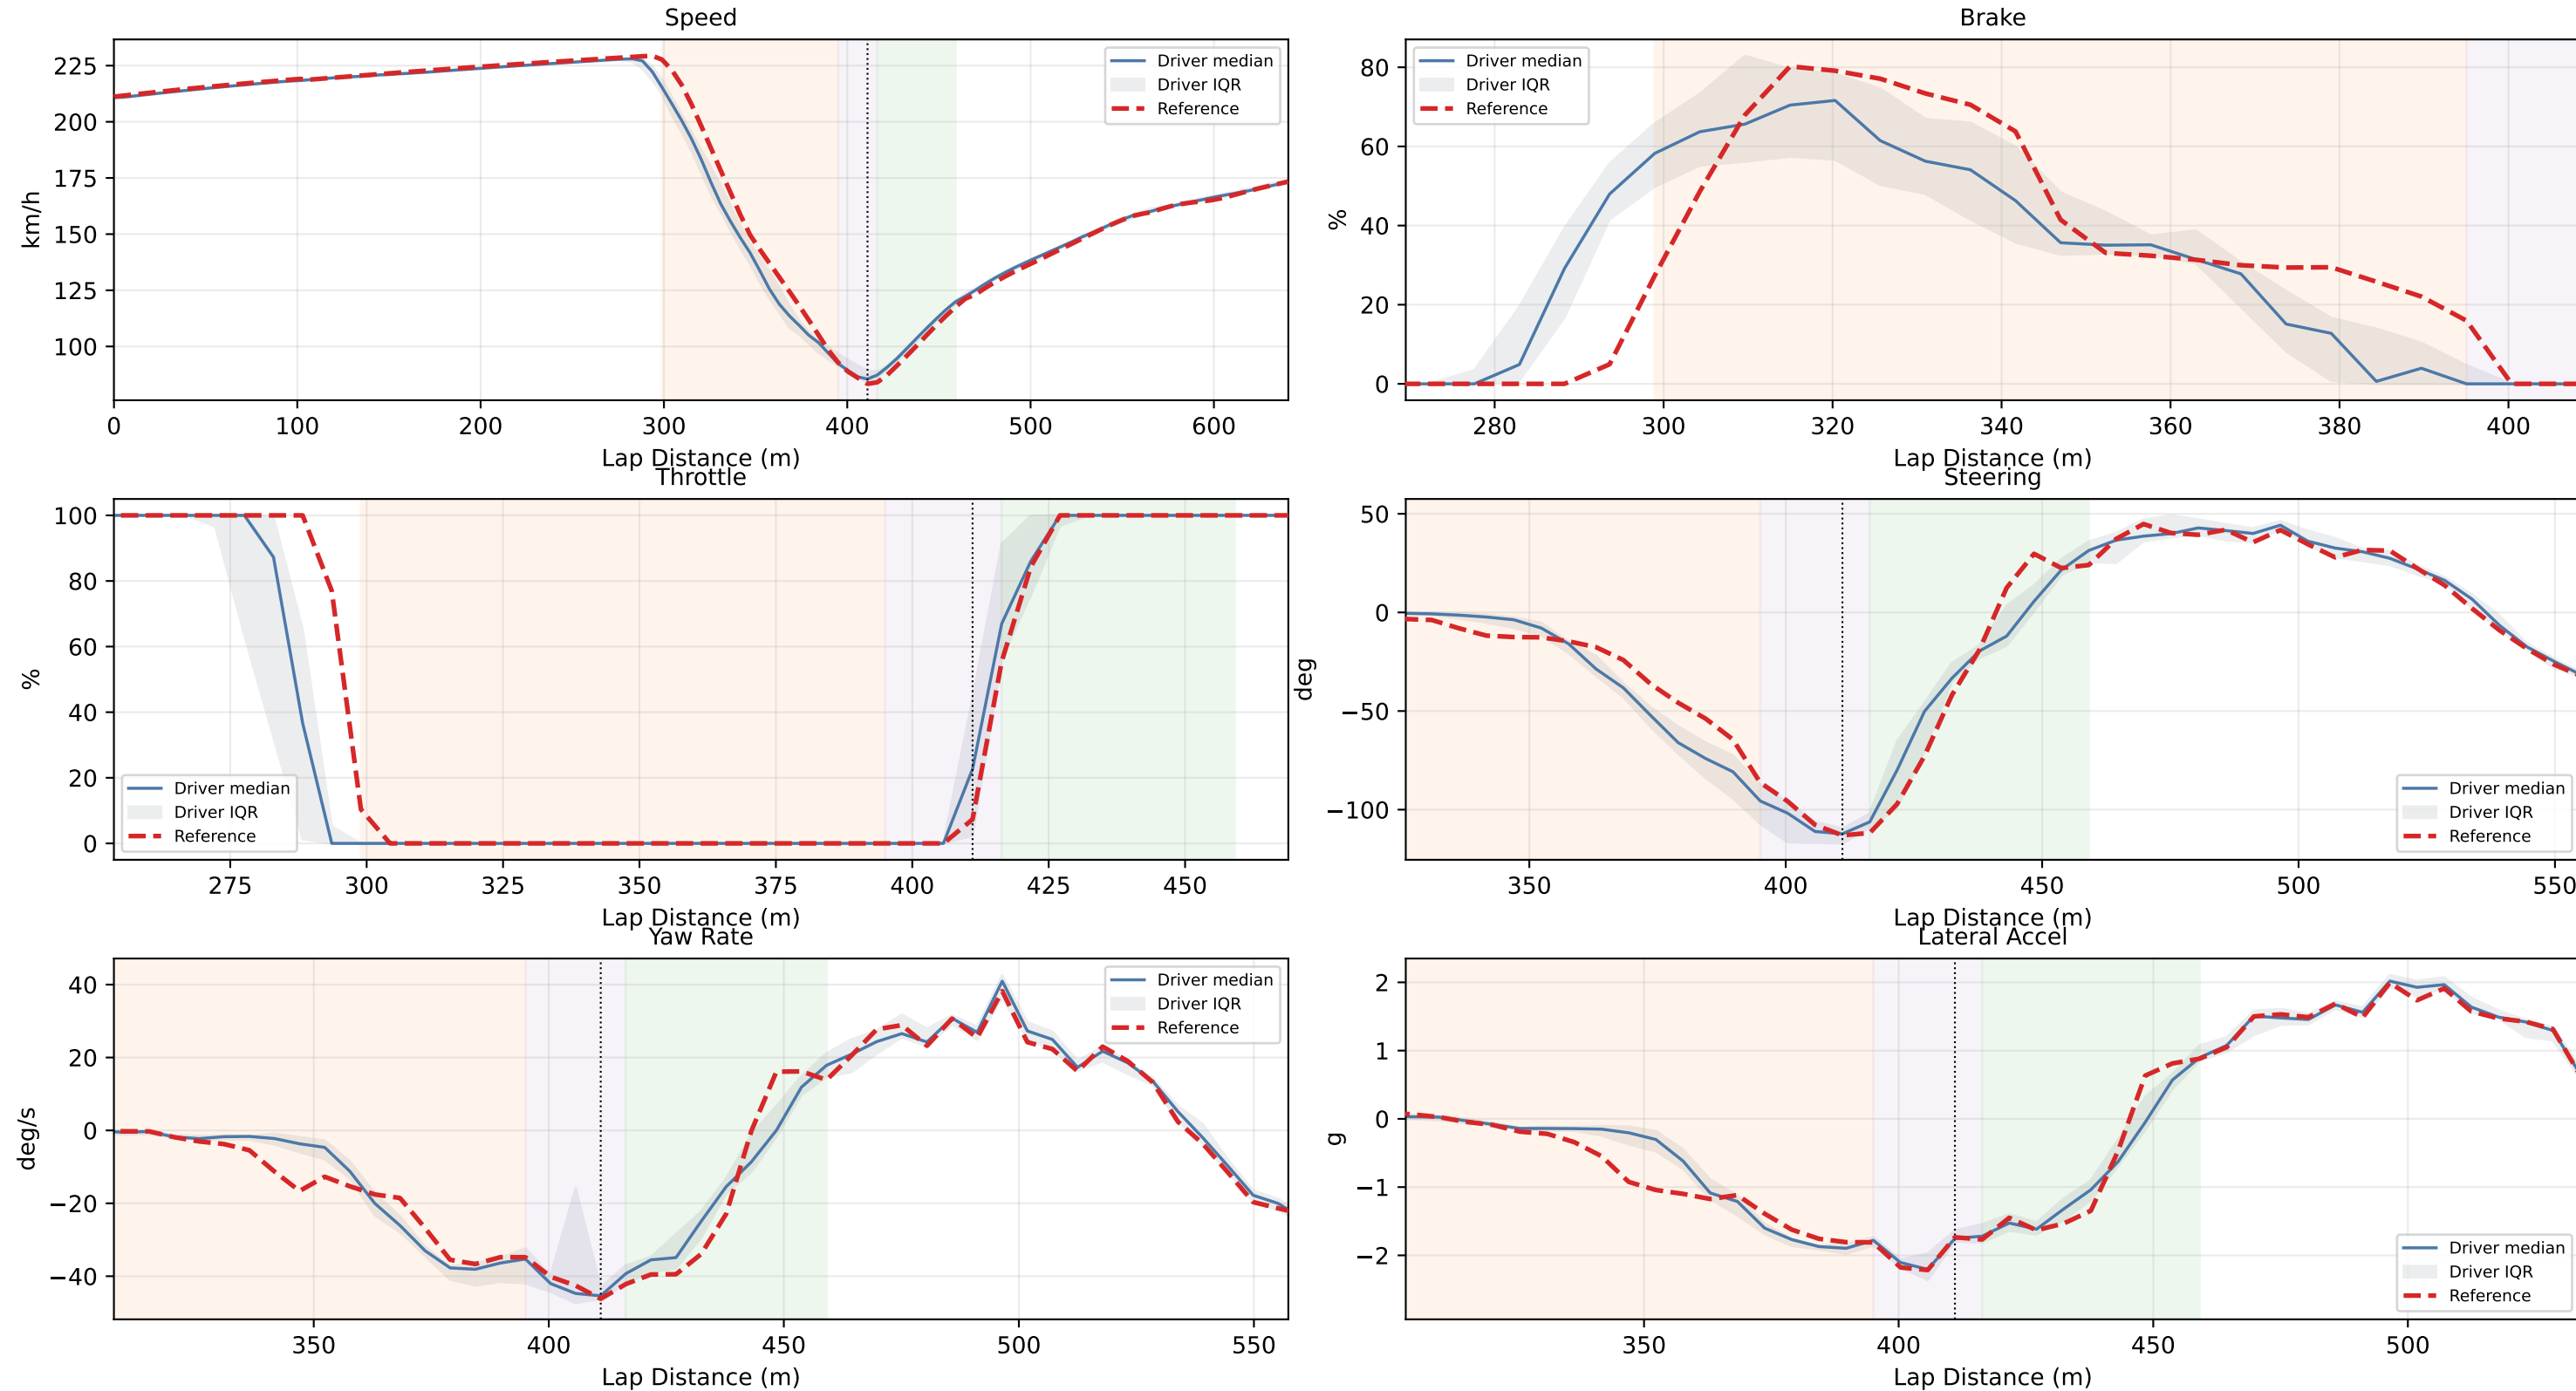

T17 Coaching (Priority 2)

Reference Segment Used: Self best-per-corner lap 8

Coaching Summary: T17 | Exit priority. Symptom: Exit phase is costing time onto the following straight. Likely cause: Throttle commitment and steering unwind are not translating into early acceleration. Evidence: time loss +4.937 s; variability +6.964 s; apex speed delta +0.37 km/h; traction time delta +1.065 s; throttle reapply delay +0.000 % lap; exit long accel delta +0.019 g; apex position offset +0.63 m. Recommended action: Commit throttle as steering opens, then build to full throttle with one smooth ramp. Practice focus: 3 laps: repeat the full-throttle point within +/-5 m with no second steering correction. Confidence: medium (0.71).

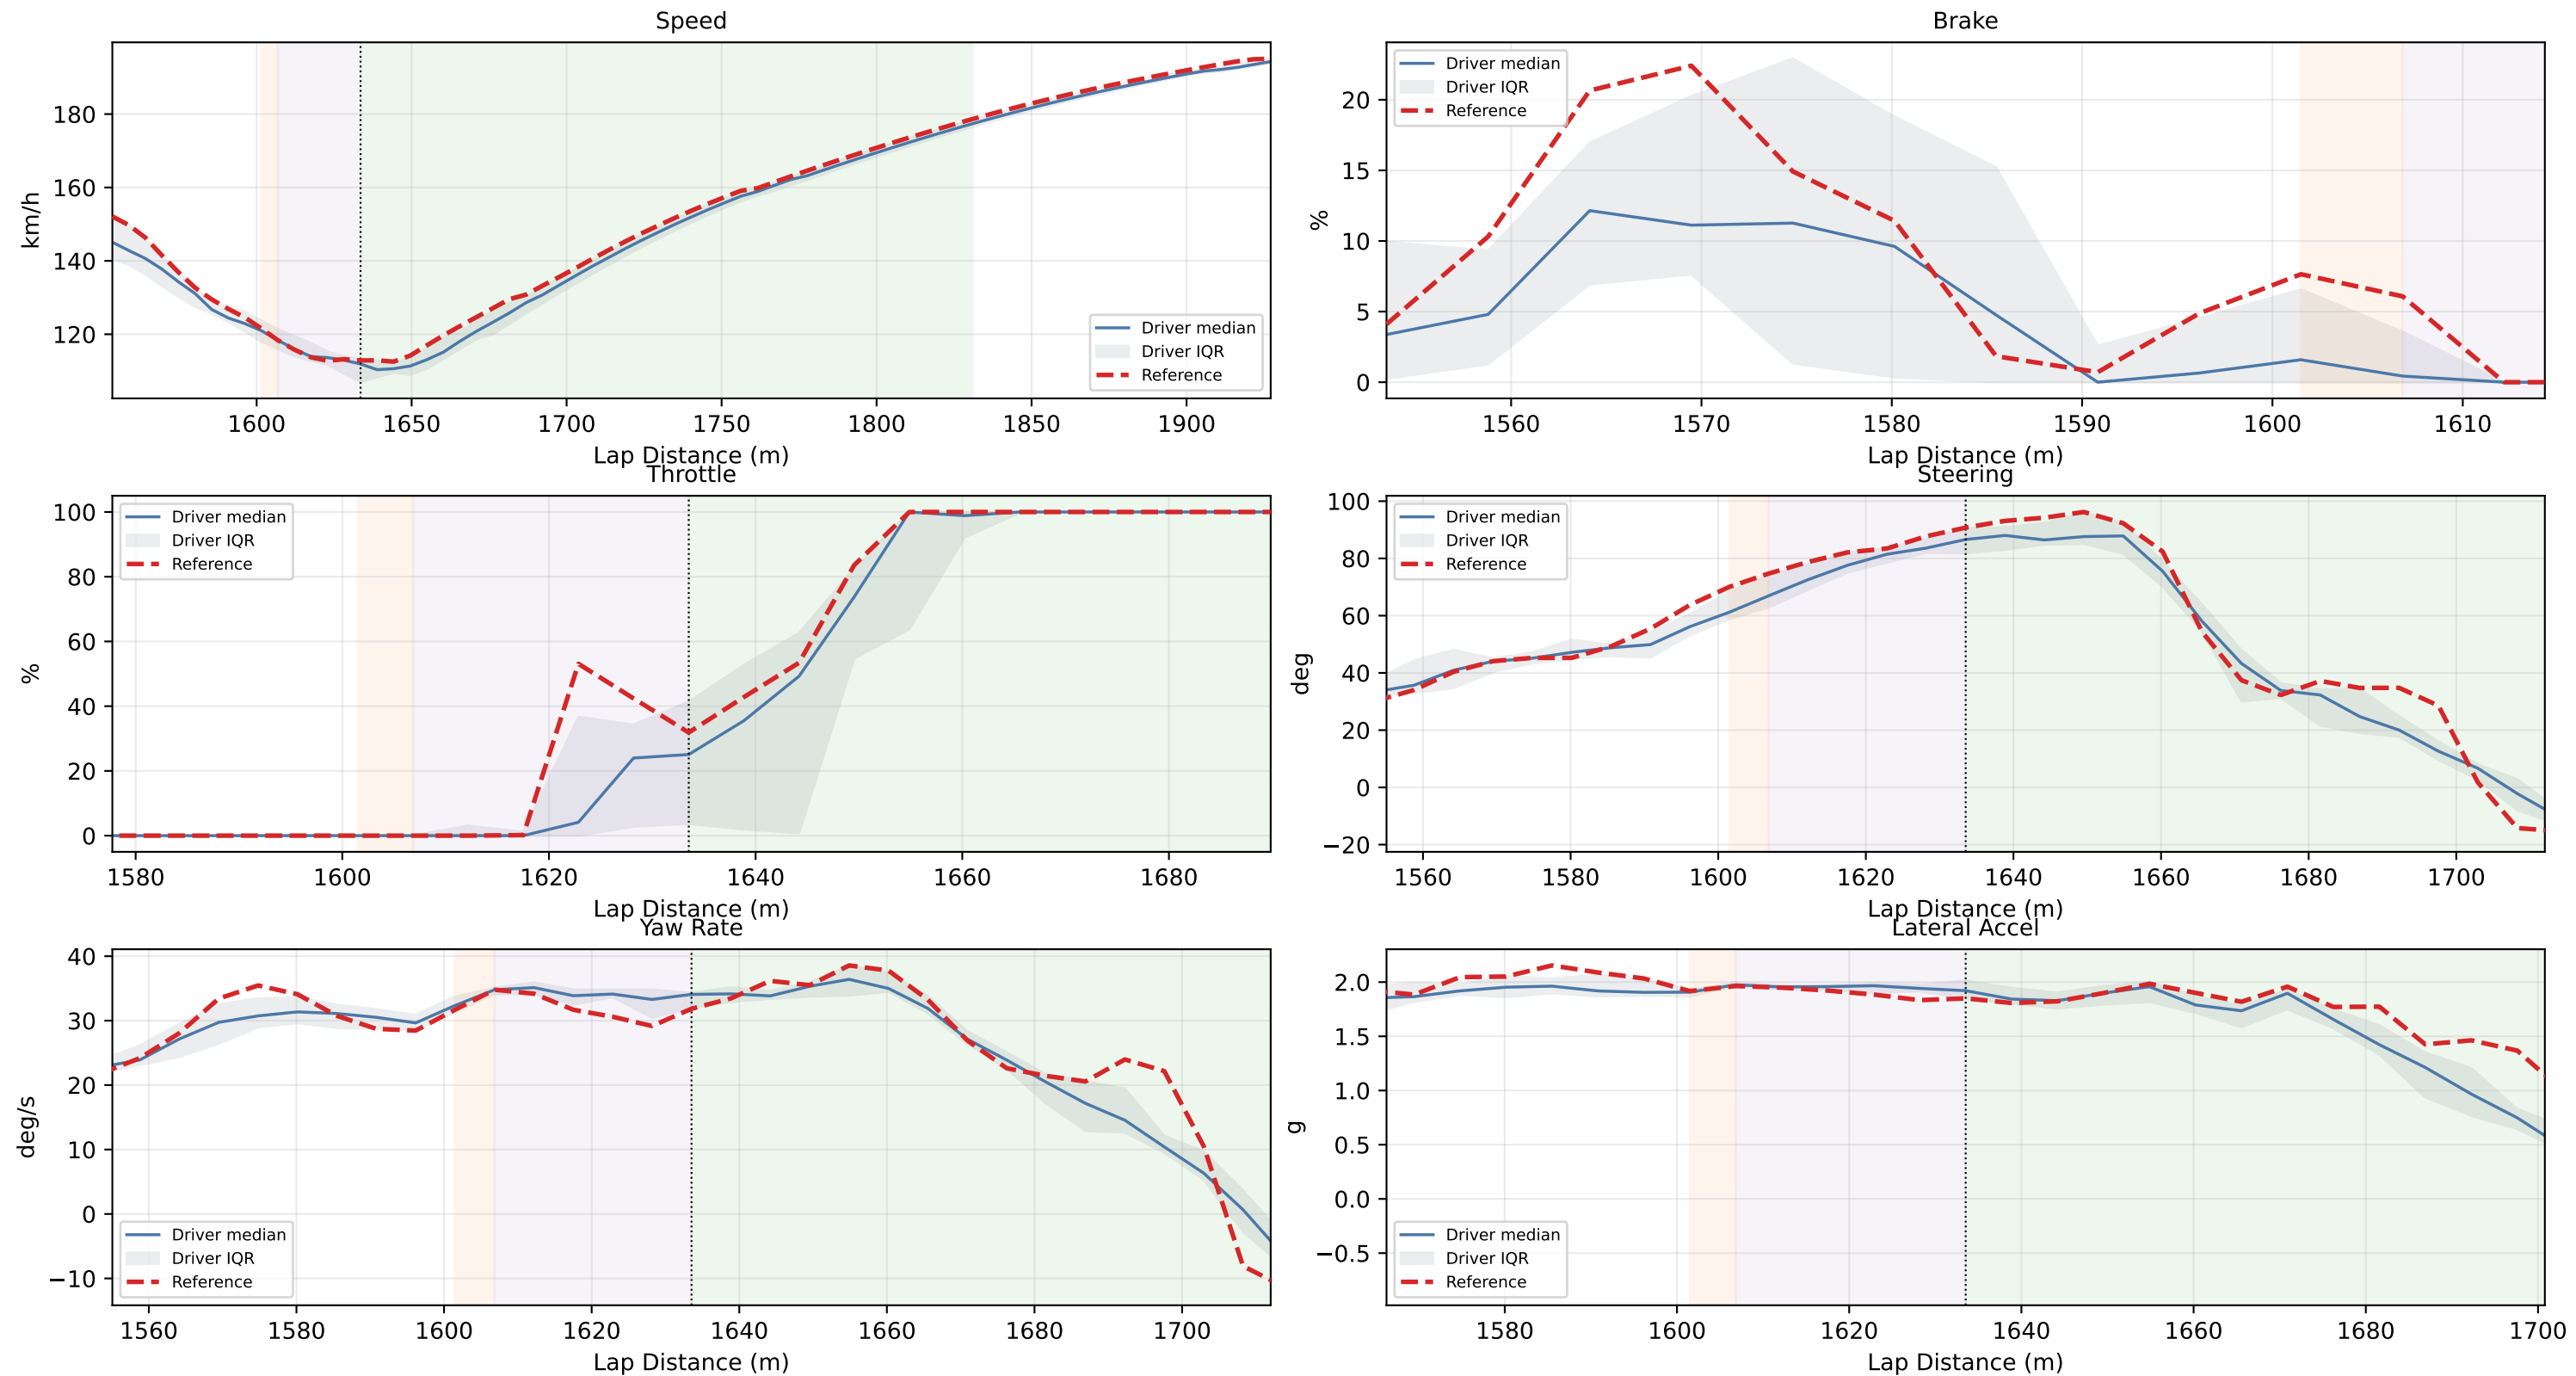

T1 Coaching(Priority 3)

Reference Segment Used: Self best-per-corner lap 10

Coaching Summary: T1 | Entry priority. Symptom: Entry phase is costing time versus reference. Likely cause: The corner starts with a speed deficit that carries into the rest of the phase. Evidence: time loss +3.109 s; variability +4.276 s; apex speed delta -3.57 km/h; braking time delta +0.881 s; brake peak delta -5.4 %; apex position offset +1.15 m. Recommended action: Focus on cleaner brake-release timing to carry minimum speed without destabilizing the car. Practice focus: Compare two consecutive laps and target identical release timing each lap. Confidence: high (1.00).

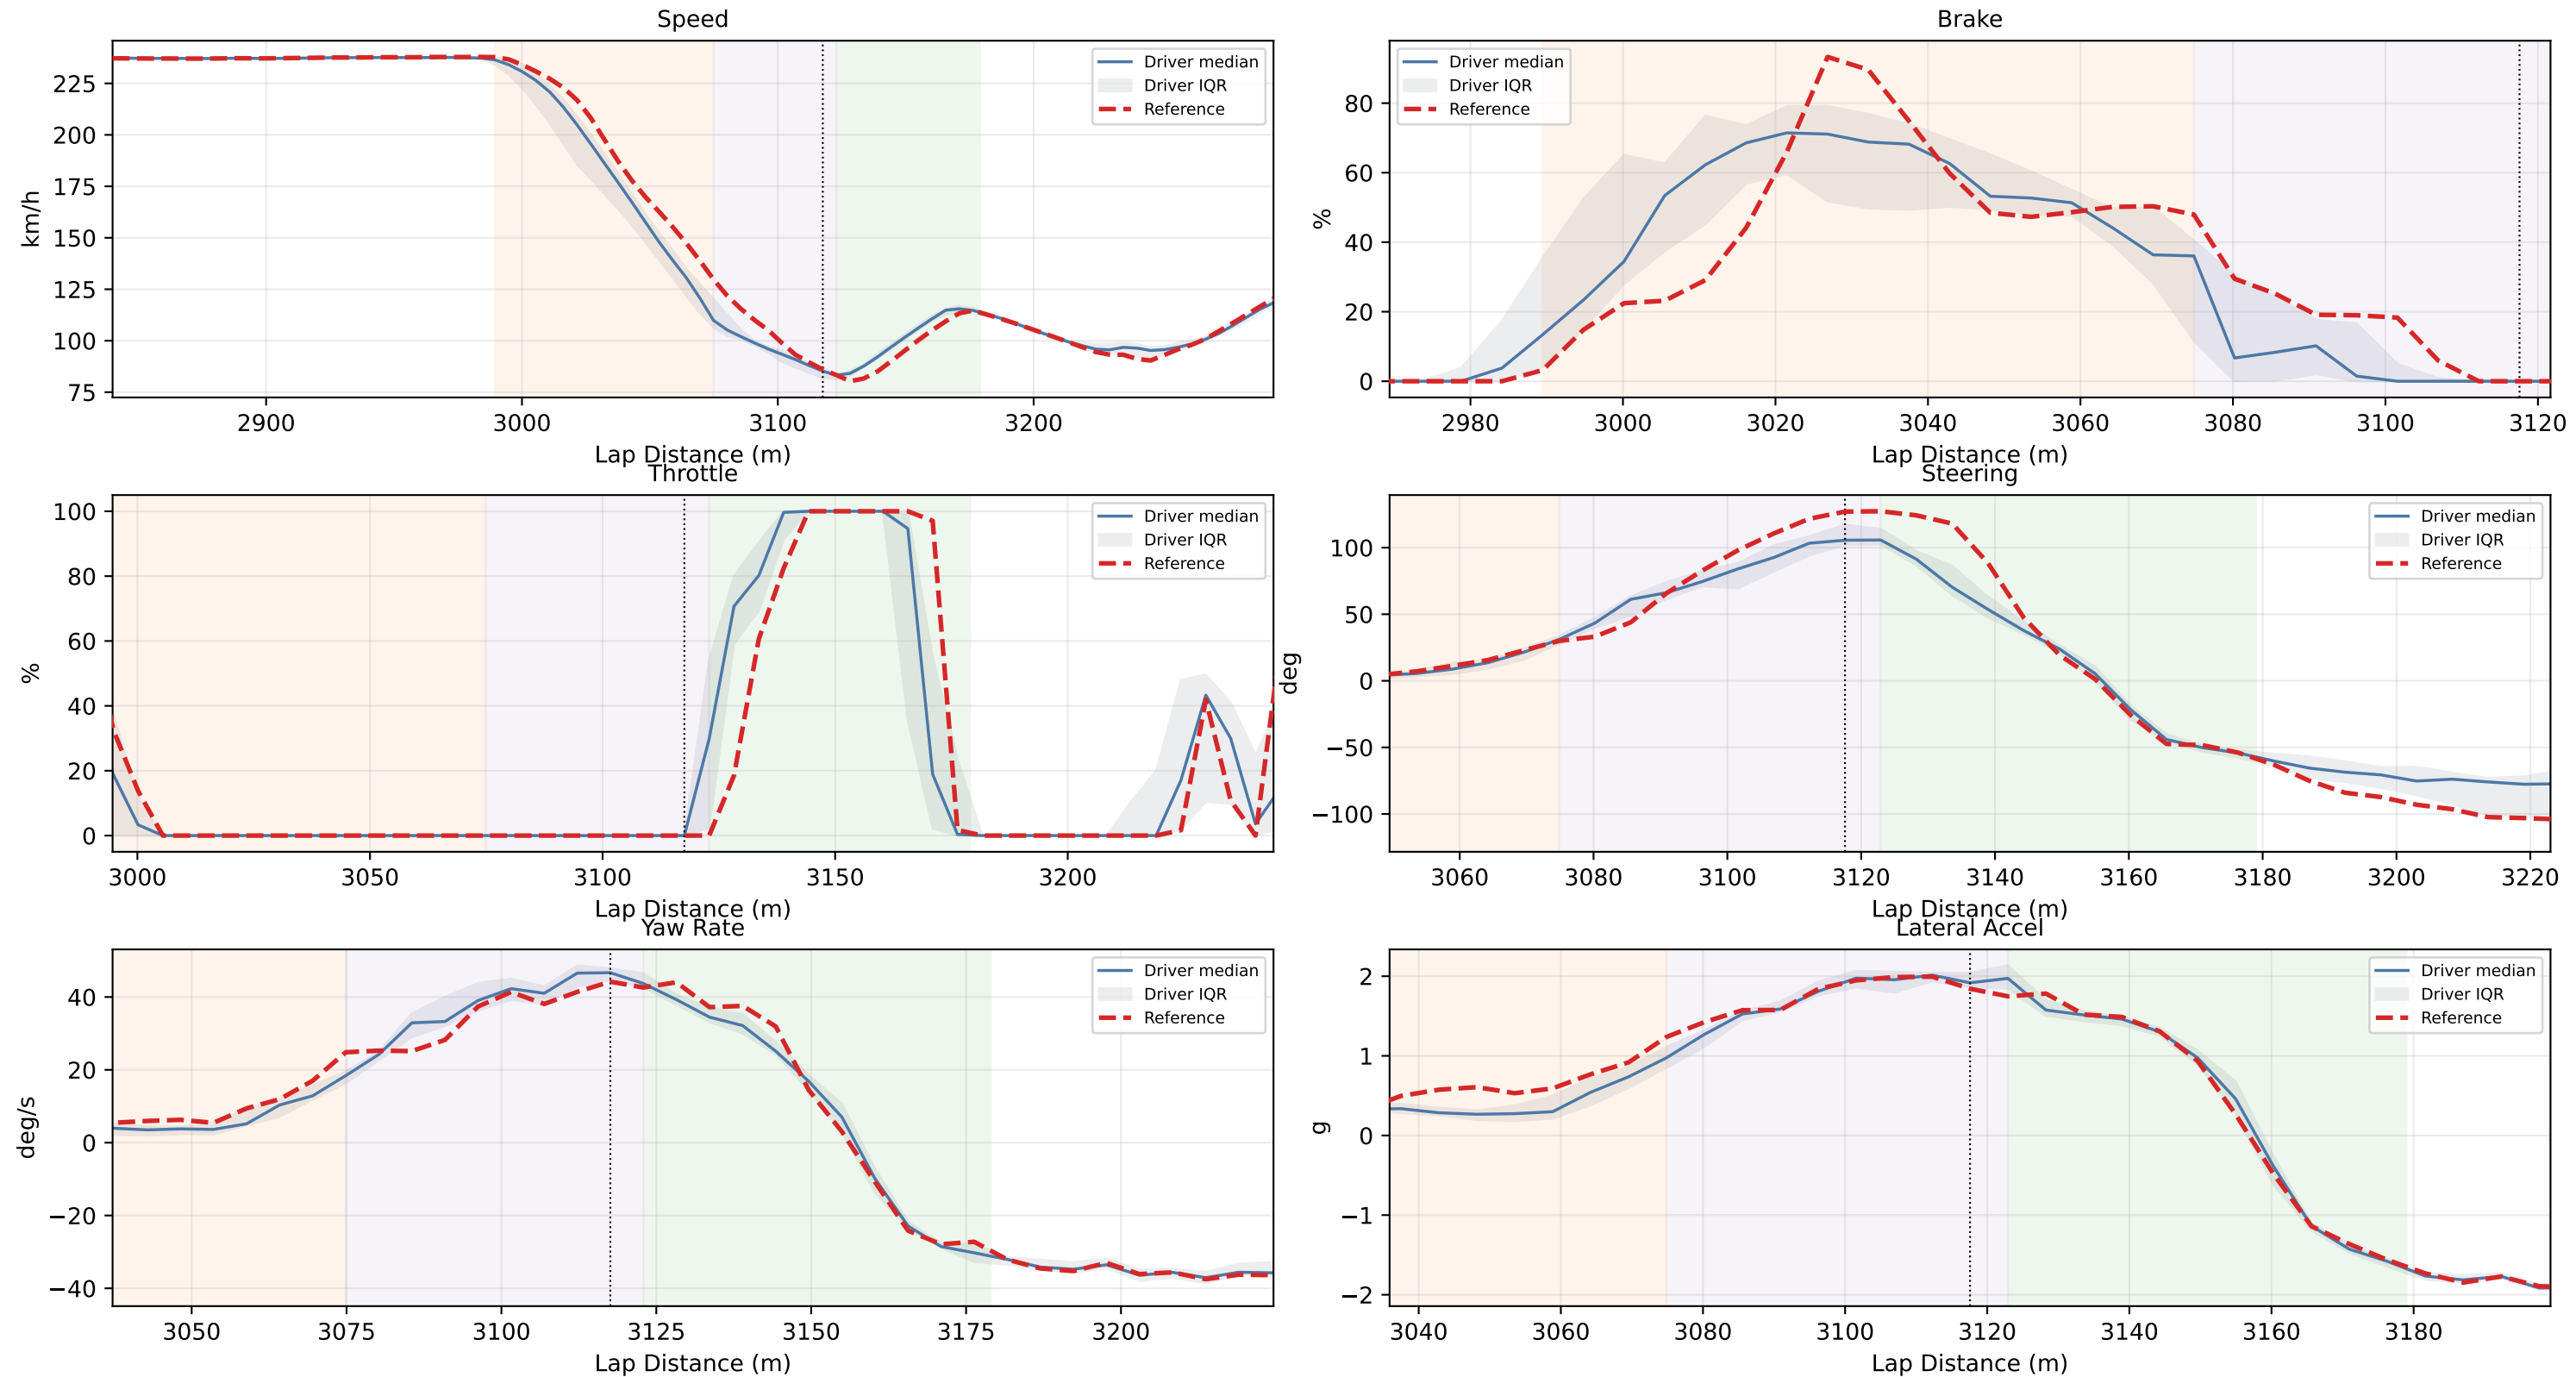

T8 Coaching (Priority 4)

Reference Segment Used: Self best-per-corner lap 10

Coaching Summary: T8 | Exit priority. Symptom: Exit phase is costing time onto the following straight. Likely cause: Throttle commitment and steering unwind are not translating into early acceleration. Positioning proxy indicates measurable apex-path offset versus reference. Evidence: time loss +2.223 s; variability +2.711 s; apex speed delta +2.67 km/h; traction time delta +1.631 s; throttle reapply delay +0.000 % lap; exit long accel delta -0.021 g; apex position offset +2.28 m. Recommended action: Commit throttle as steering opens, then build to full throttle with one smooth ramp. Apex placement also differs from reference, so prioritize a repeatable entry-to-apex path. Practice focus: 3 laps: repeat the full-throttle point within +/-5 m with no second steering correction. Confidence: medium (0.71).

T13 Coaching (Priority 5)

Reference Segment Used: Self best-per-corner lap 4

Coaching Summary: T13 | Entry priority. Symptom: Entry phase is costing time versus reference. Likely cause: The corner starts with a speed deficit that carries into the rest of the phase. Evidence: time loss +2.449 s; variability +3.367 s; apex speed delta +1.46 km/h; braking time delta +0.679 s; brake peak delta -12.2 %; apex position offset +1.37 m. Recommended action: Focus on cleaner brake-release timing to carry minimum speed without destabilizing the car. Practice focus: Compare two consecutive laps and target identical release timing each lap. Confidence: high (1.00).
